Angélica Maya

About me...

I'm a *Product Design engineering Student* who loves **understanding people**, **exploring ideas**, and turning them into **meaningful solutions**. I'm curious by nature and I'm always looking for **new ways to learn, create**, and see things from a **different perspective**.

Angélica Maya

Education

Universidad EAFIT - Medellín, Colombia
B.S. in Product Design Engineering

Interests

UX/UI Design • Product Development • Creative Problem Solving • Human-Centered Design • Visual Communication

Experience

2025-2026
Design Research Assistant
Research · Visual Communication

2024

CAD · Product Design · Academic Support

2024
VP of Communications & Marketing
Leadership · Team Coordination · Creative Direction

Software

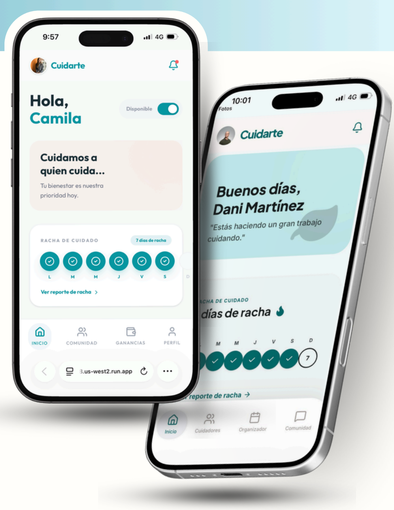

SolidWorks · Blender · Illustrator · Procreate · Canva · Useberry · Capcut

Languages

Spanish (native) | English C1 (APTIS) | French (DELF B2)

cuidarte

We care for those who care

It is a **hybrid ecosystem** designed to **support caregivers** of transplant patients throughout their caregiving journey. It integrates **two connected applications** and a **physical product** focused on **organization**, **emotional support**, and **care.**

The solution **connects family and professional caregivers to create a more human, supportive, and sustainable caregiving experience.**

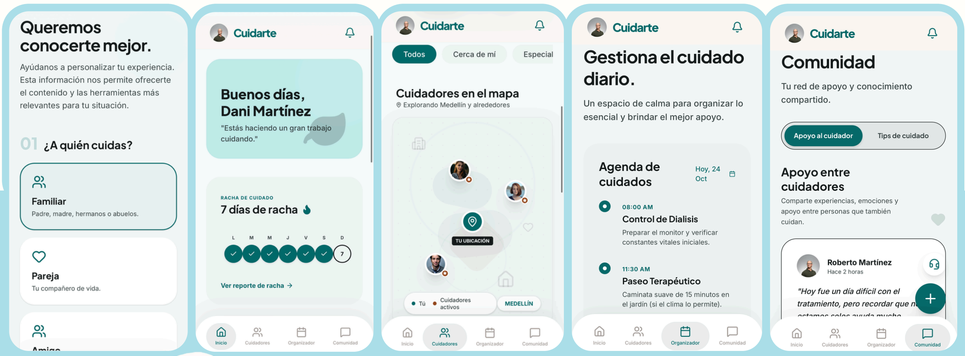

Caregiver support app

A support network for caregivers

An app designed to accompany caregivers throughout their caregiving journey.

- Care process tracking
- Task and activity organization
- Educational resources and guidance
- Emotional support and well-being spaces
- Connection with a caregiver community

"Because caring also means feeling supported."

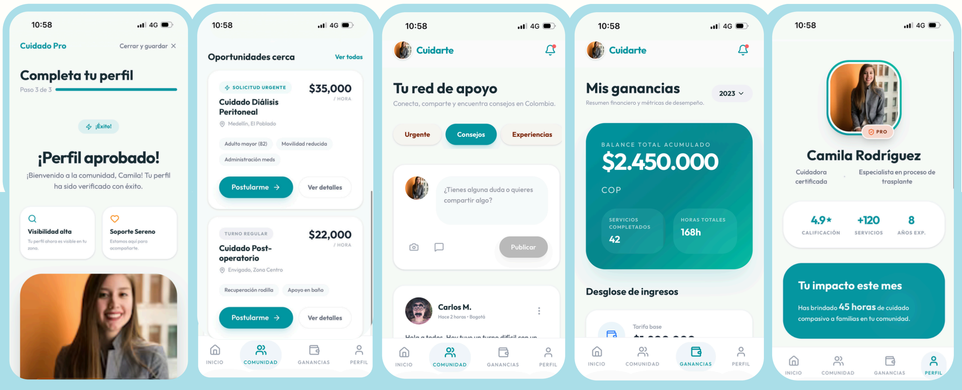

Caregiver service app

A platform connecting caregivers with families

A platform that connects verified professional caregivers with families who need support.

- Search based on specific needs
- Profile and experience comparison
- Direct contact with caregivers
- Secure in-app hiring
- Temporary respite care for moments of rest

"Because sometimes caring also means being able to rest."

Ritmo Interior

A **therapeutic card system** designed to emotionally support **patients** and **caregivers** throughout the transplant process. Through **reflection**, **exercises**, and **connection activities**, it creates moments of **pause, support,** and **well-being**, adapting to different moments and caregiving needs.

My Role:

I focused on **structuring** and **organizing the apps** to create a **clear and intuitive** caregiving experience, defining how information, features, and interactions were connected throughout the ecosystem. I also **led the design of the physical product,** Ritmo Interior, **translating the emotional needs identified in the research** into a **warmer and more tangible experience** that complemented the digital ecosystem.
